

NavCare - District Hospital Sagar

Staff & Administration Manual

What is NavCare?

NavCare is a fully interactive, voice-enabled digital navigation system designed specifically for District Hospital Sagar. It acts as an indoor Google Maps, allowing patients and visitors to find their way around the hospital without getting lost or needing to constantly ask staff for directions.

Core Features

1. **Instant QR Code Location:** Patients scan a QR code on the wall, and the app instantly knows exactly where they are standing. No typing required.
2. **Real-World Physics Routing:** Calculates the shortest walking path through the hospital corridors in perfect straight lines and 90-degree turns.
3. **Voice Search (Hindi/Bundeli):** Patients can simply tap the microphone and speak naturally. The AI automatically ignores filler words and understands local dialects.
4. **Landmark-Based Directions:** Guides patients using visual landmarks (e.g., 'Near Dental Clinic, turn left').

Recommended QR Code Placement Strategy

Because there is no constraint on the number of QR codes we can generate, we recommend a high-density 'Zone-Based' placement strategy.

Primary Zones (Essential):

- Main Entrance & Entrance No. 2 (The absolute first thing people should see)
- Help Desk & Central Reception
- Pharmacy & Medical Store

Junction Zones (Navigation Anchors):

- T-Junctions: Place a QR code exactly where the main horizontal corridor meets the central vertical corridor.
- Hallway Ends: Place one outside the CT Scan/ICU area at the far end, and one outside the Maternity Ward at the other far end.

Destination Zones (For return trips):

- Outside major wards (Ward No. 1 through 6).
- Waiting Rooms (Blood Bank, Medicine OPD, Sonography).
